PERSONAL STATEMENT

I am an experienced data professional with hands-on experience maintaining Azure-based data pipelines, automating organisational processes with Power Automate and using Databricks and Python to extract, transform and load datasets for data analysis. My current role at Warwickshire County Council has given me practical experience working alongside the Data Management team, as well as becoming familiar with the structure of the Data Analytics Platform (DAP) to deliver reliable, well-structured PowerBI dashboards for operational reporting. In addition, I am completing a level 6 Data Science degree apprenticeship, with a particular focus on data engineering principles to help build robust data architecture to support my projects.

I am a self-motivated and committed individual who takes pride and personal responsibility for producing high-quality, accurate work. I have experience working independently and as part of a team, allowing me to own, lead and execute plans and projects to a high standard. I am proactive when faced with change, with a natural desire to improve processes where needed. I enjoy reviewing, questioning and understanding new subjects and systems to become a subject matter expert.

My apprenticeship and current role have strengthened my methodical and analytical capabilities, enabling me to produce detailed management reports that deliver reliable insight for data-driven decision-making. My personal focus and attention to detail ensure every dataset is fully understood and communicated clearly to key stakeholders.

In summary I am a logical team member who is flexible, adaptable and enjoys variety and challenge. Although I enjoy my current role, I am now looking to progress into a Data Engineering position where I can further develop my skills in cloud architecture, ETL automation, database management and scalable data solutions.

KEY SKILLS

- **PowerBI -** Connecting to a range of internal and external data sources to extract valuable insights for different audiences. This skill goes hand in hand with my ability to use the DAX programming language, enabling the construction of various data measures and functions that support robust analytical and operational reporting.
- **Analytical -** Analysing and visualising information from disparate sources to develop and produce detailed management reports, enabling data driven business decisions. This includes working with large datasets, applying methodical problem-solving techniques and ensuring outputs are accurate, reliable and well-structured.
- **Stakeholder Management & Communication -** Effective communication, interpersonal and stakeholder management with cross functional colleagues at all levels. Collaborative working encourages strong working relationships, enabling informed decisions to be made. Documentation produced is comprehensive, well-structured and clearly communicates information to the intended audiences.
- **Initiative & Results Driven -** Ability to prioritise and manage workload, forming action plans and adapting to change, ensuring work is completed within expected timeframes. I proactively identify opportunities to streamline processes, improve data flows and enhance the reliability of reporting and data products.
- **Systems -** Excellent working knowledge of Microsoft Office (including Power Automate) and the following programming languages: Python, SQL and HTML. I also regularly use Databricks and Azure services to update and maintain data pipelines, supporting the extraction, transformation and loading of datasets from cloud environments to Power BI.

WORK EXPERIENCE

Business Intelligence HR & Customer Data Analyst - Warwickshire County Council
May 2024 to date

- Data collection, analysis and presentation skills used to identify trends and interpret statistics to make recommendations, informing strategic and operational decisions.
- Create high-quality, timely and interactive Power BI reports built on well-structured datasets sourced from the Azure DAP and other internal systems.
- Proactively identify new data sources and work with colleagues to integrate them into existing reporting processes, improving data coverage and reliability.
- Collaboration and strong relationships with key business functions to understand business intelligence requirements and to facilitate the exchange of information.
- Reports and documentation presented to internal and external stakeholders in written, verbal and visual formats.

- Work with stakeholders across ICT, HR and Customer Services to understand data requirements and ensure project scopes are clearly defined, with assumptions and data dependencies are validated and understood before work commences.

Crime and Community Safety Data Analyst Apprentice - Warwickshire County Council
Oct 2022 to May 2024

- Analysed and transformed data from internal and external data sources using PowerBI and Python.
- In-depth understanding of the DAX programming language to perform advanced statistical analysis.
- Using and understanding azure based data analytics platform to access large stores of data.
- Communicating with colleagues at all levels throughout the organisation to understand and develop scopes for upcoming projects and data required.
- Presenting dashboards and other reports to line managers and other key stakeholders within the council.
- Knowledge of relevant legislation (e.g. GDPR) to ensure data is appropriately stored and archived.

Swimming Teacher Assistant progressing to Teacher - CV Life
Feb 2019 to Sep 2022

- Planned and delivered swimming lessons to children, young people and adults, adapting communication and teaching methods to different abilities and needs.
- Developed strong communication, organisation and interpersonal skills while maintaining responsibility for safeguarding, health and safety.

EDUCATION / TRAINING

Fabric Data Engineer Associate (DP700) - September 2026 to date
Microsoft Qualification
Currently completing and expected to achieve by October 2026.

Apprenticeship - May 2026 to Date
BPP University
Currently completing a level 6-degree apprenticeship in Data Science.

Apprenticeship - October 2022 to May 2024
Institute for Apprenticeships and Technical Education
Level 4 Data Analyst - Pass

A-Levels - September 2020 to July 2022
Blue Coat Church of England School, Coventry
Computer Science
Physics
Maths

GCSE's - July 2020
Blue Coat Church of England School, Coventry

Geography: 8	English Literature: 7	Biology: 6
Mathematics: 7	English Language: 6	Religious Education: 6
Computer Science: 7	Physics: 6	French: 4
Design and technology: 7	Chemistry: 6	English spoken language: Distinction*

PERSONAL EXPERIENCE & INTERESTS

In my free time I participate in Muay Thai and strength training, which has helped me develop discipline, focus and resilience. I also enjoy going to the gym, walking and spending time with friends, maintaining a healthy balance outside of work.
